

**EPA SLN TX-080020**

# Material to be added to an e-Jacket/Jacket

Reg. No. TX 08 00 20 1A 42

Description: Revised label FPL

1. ☒ Placement within the e-Jacket/jacket:

☒ Default: (chronological, top = newest)

☐ File Location: (PDF page number, i.e., "before page 45")

2. ☐ Send to Data Extraction contractors this material:

☐ Newly stamped accepted label

☐ Notification

☐ New CSF

☐ Other: \_\_\_\_\_

3. Attach this coversheet to the top of the material or jacket. It must be well organized and clipped together, NOT STAPLED. Then give the material with this coversheet to staff in the Information Services Center (Room S-4900).

FIRESTORM®**

**FOR DISTRIBUTION AND USE  
ONLY WITHIN THE STATE OF TEXAS**

**EPA Reg. No. 82557-1-400**

**EPA SLN No. TX-080020**

**FOR HARVEST AID APPLICATIONS ON COTTON IN TEXAS  
(EXCEPT IN THE COUNTIES OF STARR, HIDALGO, WILLACY, AND CAMERON)**

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Follow all applicable directions, restrictions, and precautions, including statements pertaining to the Worker Protection Standards, on the EPA-registered product label.
- This label must be in the possession of the user at the time of application.

Failure to follow the directions for use and precautions on this label may result in poor pest control, crop injury, or illegal residues.

**DIRECTIONS FOR USE: Harvest Aid Applications on Cotton in Texas (except in the counties of Starr, Hidalgo, Willacy, and Cameron)**

Up to three multiple broadcast harvest aid applications of FIRESTORM® may be used. **Do not exceed a total of 32 fluid ounces (fl. oz.) (0.75 lb. active ingredient) per acre per crop season.** If multiple applications are made, allow 7 days between applications. Do not apply to cotton within 3 days of harvest. Use a minimum total spray volume per acre of 10 gallons by ground, and 5 gallons by air.

Crop	FIRESTORM® Rate per Acre	Precautions, Restrictions and Comments
Tank mixes with phosphate or chlorate defoliant	5.4 - 10.7 fl. oz. (0.13 to 0.25 lb a.i.) alone <u>or</u> tank mixed with 1½ - 2 gal. chlorate <u>or</u> 1½ - 2 pints phosphate	<ul style="list-style-type: none"> <li>• Do not harvest within 7 days of application when used with phosphate or chlorate defoliant.</li> <li>• In desert cotton areas or on rank vigorous cotton, use the 10.7 fl oz. (0.25 lb a.i.) rate of FIRESTORM.</li> <li>• Apply when 75% or more of the bolls are open and remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited.</li> <li>• Follow the Harvest Aid Use Precautions listed on the Federal label.</li> </ul>
Tank mixes for boll opening and defoliation of Southern cotton	2.7 to 3.3 fl. oz. (0.06 to 0.08 lb a.i.)	<ul style="list-style-type: none"> <li>• To aid in defoliation and opening of mature bolls, FIRESTORM may be tank mixed with the following products: DEF® defoliant, Dropp® defoliant, Prep™ PGR, Folex® defoliant, Accelerate® defoliant</li> <li>• Apply when 60% or more of the bolls are open and remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited.</li> <li>• Refer to tank mix product label for rate, directions, limitations and precautions.</li> </ul>
Harvest aid for defoliation and boll opening of stripper or spindle-harvested cotton	2.1 to 7.5 fl. oz. (0.05 to 0.18 lb a.i.)	<ul style="list-style-type: none"> <li>• Apply when 75% or more of the bolls are open and remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited. Slice bolls and inspect the seed for maturity.</li> <li>• FIRESTORM may be applied alone or tank mixed with the cotton harvest aid products listed above.</li> <li>• To avoid leaf sticking, apply FIRESTORM as a desiccant approximately 3 to 7 days after defoliation or a conditioning application and 7 to 14 days before harvest.</li> <li>• Cooler temperatures may cause longer waiting period between application of FIRESTORM as a desiccant and a subsequent defoliation/conditioning treatment.</li> <li>• Lower rates in the range may be necessary south of I-10 in Texas where temperatures are typically higher during defoliation.</li> </ul>
Late season harvest aid desiccation of stripper cotton or spindle-harvested cotton	11.2 to 21 fl. oz. (0.26 to 0.49 lb a.i.)	<ul style="list-style-type: none"> <li>• Use to desiccate regrowth occurring after defoliation or desiccation.</li> <li>• Apply when 85% of the bolls are open and the remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited. Slice bolls and inspect the seed for maturity.</li> <li>• To avoid leaf sticking, apply FIRESTORM as a desiccant approximately 3 to 7 days after defoliation or a conditioning application and 7 to 14 days before harvest.</li> <li>• Lower rates in the range may be necessary south of I-10 in Texas where temperatures are typically higher during defoliation.</li> </ul>
Desiccation of regrowth	11.2 to 21 fl. oz. (0.26 to 0.49 lb a.i.)	<ul style="list-style-type: none"> <li>• Use to desiccate regrowth occurring after defoliation or desiccation.</li> <li>• Regrowth is difficult to control, therefore, thorough coverage with the full recommended rate is necessary.</li> <li>• Control is dependent upon growing condition and desiccation of small new growth may not always be complete.</li> <li>• Use higher rate if regrowth is excessive.</li> </ul>

Refer to the FIRESTORM federal label for additional cotton recommended uses and nonionic surfactant recommendations.

**Additional Precautions, Restrictions and Comments:**

- Because of extremes in environmental and plant conditions, it is advisable to apply the range of rates on a small block of cotton to determine the rate that best fits your needs.
- Do not pasture lactating dairy animals.
- Do not pasture livestock in treated fields or feed treated foliage.
- When combined with phosphate defoliants, observe livestock precautions listed on the phosphate label.
- Do not apply to cotton within 3 days of harvest. Do not harvest within 7 days of application when used with phosphate or chlorate defoliants.

**Do not apply this product through any type of irrigation system.**

**This bulletin contains new or supplemental instructions for use of the product which may not appear on the package label.**

# TEXAS DEPARTMENT OF AGRICULTURE

TODD STAPLES  
COMMISSIONER

October 14, 2008

Ms. Barbara Purnell  
Document Processing Desk (SLN)  
Office of Pesticide Programs - H7504C  
U.S. Environmental Protection Agency  
Aerial Rios Building  
1200 Pennsylvania Ave. NW  
Washington, D.C. 20460

Dear Ms. Purnell:

Subject: Revised FIFRA Section 24(c)" Me-Too" label for Firestorm, (EPA Reg. No. 82557-1-400) for harvest aid applications on cotton in Texas (except in the counties of Starr, Hidalgo, Willacy and Cameron).

Enclosed is a FIFRA Section 24(c) "Me-Too" label from Chemtura Corporation for the SLN registration of paraquat herbicide originally registered by Syngenta CropProtection as Gramoxone Max (EPA Reg. No. 100-1074) and then subsequently as Gramoxone Inteon EPA Reg. No. 100-1217). This label is identical to the Syngenta label in rates applied of lbs ai/acre. In addition, we are supplying you with copies of the federally registered product label for your information to support this registration.

This proposed Me-Too SLN label will amend the federal label to authorize the use of Firestorm Herbicide as a harvest aid for cotton in Texas except in the following counties: Cameron, Starr, Hidalgo, and Willacy. This product label is registered as a trademark of Chemtura Corporation and will be distributed in Texas as Chemtura's Firestorm product.

The Texas Department of Agriculture hereby approves this FIFRA Section 24(c) application as of this date, assigns EPA SLN No. TX-080020, and submits the revisions as per EPA.

Sincerely Yours,

A handwritten signature in black ink, appearing to read "Ambrose Charles", is located above the typed name.

Subject: Notice of Intent to Disapprove  
Paraquat SL Herbicide (EPA Reg. No. 82557-1) and  
Firestorm Herbicide (EPA Reg. 82557-1-400)  
EPA SLN Nos. TX080019 and TX080020

The State of Texas issued State Registrations, SLN Nos. TX-080019 and TX-080020, on July 7, 2008, under Section 24 (c) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, to Sinon USA Inc. and Chemtura Corporation. These registrations were issued for the application of the paraquat dichloride in/on cotton for harvest aid applications in Texas (except in the counties of Starr, Hidalgo, Willacy, and Cameron).

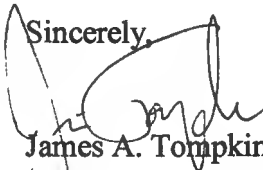

Decision

The Agency concludes that the Notice of Intent to Disapprove EPA SLN Nos. TX-080019 and TX-080020, which was dated July 28, 2008, is hereby withdrawn and that EPA SLN Nos. TX-080019 and TX-080020 are approved, provided you submit revised labeling including the following changes to both labels:

1. Revise "2 pints" to "32 fl ounces" on page 1.
2. Add "Up to" before the statement "Three multiple broadcast harvest aid applications of Paraquat SL [Firestorm] may be used."
3. Add the following restrictions to the "Additional Precautions, Restrictions and Comments" section:
  - a. "If multiple applications are made, allow 7 days between applications"
  - b. "Do not apply to cotton within 3 days before harvest"

If you have any questions, please contact Hope Johnson at 703-305-5410.

Sincerely,

  
James A. Tompkins

Herbicide Branch  
Registration Division (7505P)

**I. CONCLUSIONS**

The SLN application for the use of paraquat dichloride, formulated as Firestorm®, as a harvest aid in cotton, is adequately supported by residue data. The existing tolerance for paraquat, calculated as the cation, on cotton, undelinted seed, of 0.5 ppm is unlikely to be exceeded. (40 CFR §180.205)

**II. ACTION REQUESTED**

Determine if adequate residue chemistry data are available to support the requested use of paraquat as a harvest aid on cotton at an increased use rate of 0.75 lb ai/A/year, compared to the Section 3 maximum use rate of 0.50 lb ai/A/year in the State of Texas. No Residue Chemistry data were included in this submission.

### III. BACKGROUND

Paraquat dichloride is been registered for use on cotton, including use as a harvest aid. The currently registered use is shown in Table A. The maximum application rate as a harvest aid for the Section 3 registrations is 0.5 lb ai/A. The PC Code, nomenclature, and chemical structure of paraquat dichloride are listed below in Table 1. The physicochemical properties of paraquat dichloride are listed in Table 2.

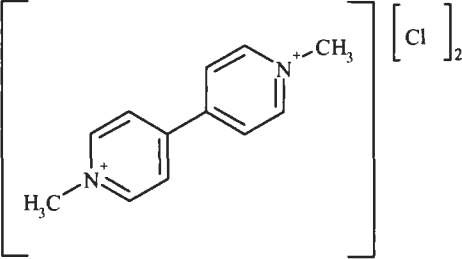

Table 1. Nomenclature of Paraquat Dichloride.	
Compound	
Common name	Paraquat dichloride
IUPAC name	1,1'-dimethyl-4,4'-bipyridinium dichloride
CAS name	1,1'-dimethyl-4,4'-bipyridinium dichloride
CAS registry number	1910-42-5 (4685-14-7 for the cation)
End-use product (EP)	2.0 lb paraquat cation/gal SC (Gramoxone Inteon; EPA Reg. No. 100-1217)

Table 2. Physicochemical Properties of Technical Grade Paraquat Dichloride.		
Parameter	Value	Reference
Melting point/range	decomposes at ca. 340 °C	Product Chemistry Chapter of the Paraquat Dichloride Update, 10/10/91
pH	6.4 at 20 °C	
Density	1.5 g/cm <sup>3</sup> at 25 °C	
Water solubility (20 °C)	freely soluble in water: 618-620 g/L at pH 5.2, 7.2, and 9.2	
Solvent solubility (20 °C)	<0.1 g/L in acetone, dichloromethane, toluene, ethyl acetate, and hexane; 143 g/L in methanol	
Vapor pressure	<<10 <sup>-8</sup> kPa at 25 °C	
Octanol/water partition coefficient, Log(K <sub>OW</sub> )	log K <sub>OW</sub> = -4.5 at 20 °C	
Dissociation constant, pK <sub>a</sub>	N/A	
UV/visible absorption spectrum	Not available	

A Reregistration Eligibility Document has been completed for paraquat dichloride in 08/1997, and is available on OPP's web page. The HED Chapter for the RED was completed December 19, 1995. The Residue Chemistry Chapter for the RED was completed 7/28/1995 (D. Miller, DP Barcode 217262).

A tolerance for residues of paraquat, calculated as the cation, on cotton, undelinted seed, of 0.5 ppm has been established to cover use of paraquat dichloride on cotton. (40 CFR §180.205). The RED required a tolerance for residues of paraquat on cotton, gin byproducts, along with supporting residue data. The required data have been submitted and reviewed (D. Dotson, 7/30/2006, DP Barcode 327806). These data included the higher application rate requested for this 24(c).

The requested 24(c) registration, TX080020, uses the supplementally registered product Firestorm®, EPA Reg. No. 82557-1-400, which is based on the registered product, Paraquat SL Herbicide, EPA Reg. No. 82557-1, registered to Sinon USA, listed in OPPIN as an Emulsifiable Concentration formulation.

#### **IV. RESULTS/DISCUSSION**

The use proposed in this 24(c) application and the currently registered uses of paraquat dichloride on cotton are summarized in Appendix A of this document.

No residue data were included in this submission. Residue data for paraquat dichloride on cotton were last reviewed by D. Dotson in his memo of 7/31/2006, DP#327806.

HED previously concluded (D. Dotson, 7/31/2006, DP#327806) that adequate geographically representative field trial data have been submitted for cotton. The submitted crop field trial data support the following use pattern:

For cotton, a maximum seasonal rate of 3.0 lb ai/A, as a single preemergence application at 1.25 lb ai/A, two postemergence directed applications at 0.5 lb ai/A/application, and three defoliation applications at a total of 0.75 lb ai/A; with a retreatment interval of 14 days for postemergence applications and 7 days for defoliation applications. Samples were collected after a 3 day PHI.

HED previously concluded (D. Dotson, 7/31/2006, DP#327806) that adequate spectrophotometric analytical methods were available in PAM II to enforce the paraquat tolerance on cotton. The submitted residue data were adequately supported by storage stability data. An analytical standard for paraquat dichloride is currently available in the National Pesticide Standards Repository. And that the residues from the proposed use for this 24(c) application will not exceed the now established tolerance.

Site	Application Type Application Timing Application Equipment	Formulation [EPA Reg. No.]	Maximum Single Application Rate (cation)	Maximum Number of Applications	Minimum Retreatment Interval (Days)	Use Limitations <sup>a,b</sup>
	Harvest aid (desiccation) Ground or aerial equipment	1.5 lb/gal SC/L [10182-103] 2 lb/gal SC/L [10182-111] 2.5 lb/gal SC/L [10182-280] 3 lb/gal SC/L [10182-372]	0.25-0.5 lb/A (of regrowth)	NS	NS	Use of the 1.5 and 2 lb/gal SC/L formulations is not permitted in CA. Apply in a minimum spray volume of 10 gal/A by ground or 5 gal/A by air. Livestock may not be pastured in treated areas. The feeding of treated foliage is prohibited. A 3-day PHI and a 48-hour REI have been established. A maximum seasonal rate of 0.5 lb cation/A is in effect.

<sup>a</sup> REI = Reentry interval; and PHI = Preharvest interval. All applications must be made using a non-ionic surfactant or crop oil concentrate. The RED required the registrant to specify the maximum number of applications per growing season (or maximum seasonal rate) that may be allowed for any crop with registered postemergence use.

<sup>b</sup> The following rotational crop restrictions have been established for the 7.84% SC/L (EPA Reg. No. 10182-134) formulation: (i) Corn, cotton, soybean, potatoes, safflower, and grain or forage sorghum treated with Concep II may be replanted immediately; (ii) Barley or wheat may be planted 4.5 months following treatment. Corn, cotton, soybeans, peanuts, potatoes, safflower, sorghum, pod crops, root crops, barley, buckwheat, milo, oats, rice, rye, or wheat may be planted in the spring following treatment; grazing or feeding of forage or fodder from cotton is prohibited. All other rotational crops may be planted 18 months after application; and (iii) Corn, cotton, soybeans, peanuts, potatoes, safflower, sorghum or pod crops may be planted in the spring following a lay-by treatment or multiple treatments applied the previous season. All other rotational crops may be planted 18-months after a lay-by application.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
WASHINGTON, D.C. 20460

OFFICE OF  
PREVENTION, PESTICIDES AND  
TOXIC SUBSTANCES

JUL 28 2008

Ambrose Charles  
Deputy Assistant Commissioner  
Texas Department of Agriculture  
PO Box 12847  
Austin, TX 78711

Subject: Notice of Intent to Disapprove  
Paraquat SL Herbicide (EPA Reg. No. 82557-1) and  
Firestorm Herbicide (EPA Reg. 82557-1-400)  
EPA SLN Nos. TX080019 and TX080020

The State of Texas issued State Registrations, SLN Nos. TX-080019 and TX-080020, on July 7, 2008, under Section 24 (c) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, to Sinon USA Inc. and Chemtura Corporation. These registrations were issued for the application of the paraquat dichloride in/on cotton for harvest aid applications in Texas (except in the counties of Starr, Hidalgo, Willacy, and Cameron).

Decision

The Agency concludes that SLN Nos. TX-080019 and TX-080020 may be disapproved for the reasons provided below. If the state can satisfy the Agency's concerns set forth below, this notification may be withdrawn. Therefore, you should take immediate steps to consult with the appropriate Agency designee identified below and respond to this notice.

Reasons for Disapproval

The requested increase of the maximum seasonal application rate for cotton harvest aid uses from 0.5 lb ai/A to 0.75 lb ai/A was not supported with any additional residue data in these submissions, nor was an explanation as to why there is no need for any residue data submitted in support of these requests.

Response

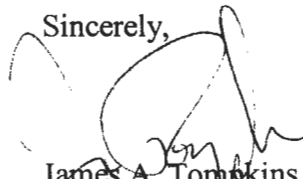

You should respond to the deficiencies described above in writing within ten days of receipt of this notice. You may also request a consultation with the Agency prior to a final disapproval decision. Failure to respond in a timely and adequate manner may result in disapproval of EPA SLN Nos. TX-080019 and TX-080020.

Ms. Barbara Purnell  
Document Processing Desk (SLN)  
Office of Pesticide Programs - H7504C  
U.S. Environmental Protection Agency  
Aerial Rios Building  
1200 Pennsylvania Ave. NW  
Washington, D.C. 20460

Dear Ms. Purnell:

Subject: FIFRA Section 24(c)" Me-Too" label for Firestorm, (EPA Reg. No. 82557-1-400) for harvest aid applications on cotton in Texas (except in the counties of Starr, Hidalgo, Willacy and Cameron).

Enclosed is a FIFRA Section 24(c) "Me-Too" label from Chemtura Corporation for the SLN registration of paraquat herbicide originally registered by Syngenta CropProtection as Gramoxone Max (EPA Reg. No. 100-1074) and then subsequently as Gramoxone Inteon EPA Reg. No. 100-1217). This label is identical to the Syngenta label in rates applied of lbs ai/acre. In addition, we are supplying you with copies of the federally registered product label for your information to support this registration.

This proposed Me-Too SLN label will amend the federal label to authorize the use of Firestorm Herbicide as a harvest aid for cotton in Texas except in the following counties: Cameron, Starr, Hidalgo, and Willacy. This product label is registered as a trademark of Chemtura Corporation and will be distributed in Texas as Chemtura's Firestorm product.

The Texas Department of Agriculture hereby approves this FIFRA Section 24(c) application as of this date and assigns EPA SLN No. TX-080020.

Sincerely Yours,

Ambrose Charles  
Deputy Assistant Commissioner  
Pesticide Programs Division

**SUMMARY:**

Obtain defoliation and regrowth control data to support a Section 24(c) SLN label for Texas.

Trial conditions: Plots were established on a dryland cotton field northeast of Lubbock, TX near Blanco. Firestorm was tested in four different treatment scenarios to evaluate cotton defoliation, leaf desiccation and juvenile regrowth control using various rate combinations in sequential or tank mix applications. The main objective was to show that these treatments would provide defoliation and/or desiccation of all plant leaves to allow stripper machine harvesting common to cotton grown in West Texas. The total amount of Firestorm applied per treatment was 0.75 lb a.i./A. The current use label allowed a total of 0.5 lb a.i./A. Non-ionic surfactant was added to all Firestorm treatments at 0.25% v/v. Cotton was mature and ready for defoliation. Performance ratings were made 9, 14 and 24 DAIT.

Results: All Firestorm treatments gave satisfactory defoliation and leaf desiccation performance when rated at 14 DAIT. Some green leaf was observed in the Prep + Def (21 + 16 fl oz/A) f.b. Firestorm (11 fl oz/A) treatment at that time. An additional Firestorm application of 21 fl oz/A was to follow to clean up the remaining leaves and any regrowth. The high rate of Firestorm (32 fl oz/A) applied once did an outstanding job of leaf desiccation/defoliation with no green leaves remaining. At 24 DAIT, no green leaves remained on plants in the Firestorm + Def f.b. Firestorm (6.7 + 16 f.b. 25.3 fl oz/A) and Firestorm (32 fl oz/A) treatments and just a trace of green leaf in Prep + Def f.b. Firestorm f.b. Firestorm (21 + 16 f.b. 11 f.b. 21 fl oz/A) and Firestorm f.b. Firestorm (5.3 f.b. 26.7 fl oz/A) treatments. Firestorm applied for regrowth control at 21 fl oz/A 19 days following Firestorm applied at 11 fl oz/A as a sequential treatment to Def + Prep did not control juvenile regrowth. The best regrowth control occurred in the plots treated once with the high rate of Firestorm with ratings of 0 and 22.5%, for terminal and basal, respectively.

13	Untreated			--

A final evaluation was performed on November 5th to see if there was any desiccation of the juvenile growth in treatment 9 following the 21 oz application of Firestorm. Visual observations indicated very little control of regrowth, however, there was some "spotting" on the leaves in the plots sprayed with the late Firestorm application. No formal analysis was performed on this observation with control of regrowth for treatment 9 at less than 10%.

**SUMMARY:**

Obtain defoliation and regrowth control data to support a Section 24(c) SLN label for Texas.

# Chemtura Corporation

Trial conditions: Plots were established on a dryland cotton field Lamesa, TX. Firestorm was tested in four different treatment scenarios to evaluate cotton defoliation, leaf desiccation and juvenile regrowth control using various rate combinations in sequential or tank mix applications. The main objective was to show that these treatments would provide defoliation and/or desiccation of all plant leaves to allow stripper machine harvesting common to cotton grown in West Texas. The total amount of Firestorm applied per treatment was 0.75 lb a.i./A. The current use label allowed a total of 0.5 lb a.i./A. Non-ionic surfactant was added to all Firestorm treatments at 0.25% v/v. Cotton was mature and ready for defoliation. Initial defoliation treatments were applied on October 10. The high rate (32 oz), single application of Firestorm was delayed due to crop maturity until October 19 at which time sequential Firestorm treatments were also applied. Performance ratings were made 9 and 16 DAIT.

Results: Firestorm treatments did an excellent job of defoliating cotton when rated at 16 DAIT (7 DA-2). The high rate treatments consisting of Firestorm followed by (f.b.) Firestorm (5.3 f.b. 26.7) and Firestorm + Def f.b. Firestorm (6.7 + 16 f.b. 25.3 fl oz/A) and the single application of 32 fl oz/A of Firestorm (0.75 lb a.i./A) gave defoliation ratings of 93.8-95.5% with minimal leaf desiccation of 1-6%. The standard treatment of Prep + Def f.b. Firestorm (21 + 16 f.b. 11 fl oz/A) gave the best defoliation and scored 98.3% with 1.3% desiccation. The third application of 21 fl oz/A of Firestorm following the Prep + Def f.b. Firestorm treatment was not required due to the high level of performance of the previous two defoliation applications and the lack of juvenile regrowth in the those plots. This study indicated that a high rate of Firestorm applied either as sequential or single sprays was very effective for cotton defoliation and leaf desiccation required for stripper harvest operations.

**RESTRICTED USE PESTICIDE.**

Due to acute toxicity,

For retail sale to and use only by Certified Applicators, or persons under their direct supervision, and only for those uses covered by the Certified Applicator's certification.

**FIFRA Section 24(c) Supplemental Label  
FIRESTORM®**

**FOR DISTRIBUTION AND USE  
ONLY WITHIN THE STATE OF TEXAS**

EPA Reg. No. 82557-1-400

EPA SLN No. TX-080020

**FOR HARVEST AID APPLICATIONS ON COTTON IN TEXAS  
(EXCEPT IN THE COUNTIES OF STARR, HIDALGO, WILLACY, AND CAMERON)**

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Follow all applicable directions, restrictions, and precautions, including statements pertaining to the Worker Protection Standards, on the EPA-registered product label.
- This label must be in the possession of the user at the time of application.

Failure to follow the directions for use and precautions on this label may result in poor pest control, crop injury, or illegal residues.

**DIRECTIONS FOR USE: Harvest Aid Applications on Cotton in Texas (except in the counties of Starr, Hidalgo, Willacy, and Cameron)**

Three multiple broadcast harvest aid applications of FIRESTORM® may be used. **Do not exceed a total of 2 pints (0.75 lb. active ingredient) per acre per crop season.** Use a minimum total spray volume per acre of 10 gallons by ground, and 5 gallons by air.

Crop	FIRESTORM® Rate per Acre	Precautions, Restrictions and Comments
Tank mixes with phosphate or chlorate defoliant	5.4 - 10.7 fl. oz. (0.13 to 0.25 lb a.i.) alone <u>or</u> tank mixed with 1½ - 2 gal. chlorate <u>or</u> 1½ - 2 pints phosphate	<ul style="list-style-type: none"> <li>• Do not harvest within 7 days of application when used with phosphate or chlorate defoliant.</li> <li>• In desert cotton areas or on rank vigorous cotton, use the 10.7 fl oz. (0.25 lb a.i.) rate of FIRESTORM.</li> <li>• Apply when 75% or more of the bolls are open and remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited.</li> <li>• Follow the Harvest Aid Use Precautions listed on the Federal label.</li> </ul>
Tank mixes for boll opening and defoliation of Southern cotton	2.7 to 3.3 fl. oz. (0.06 to 0.08 lb a.i.)	<ul style="list-style-type: none"> <li>• To aid in defoliation and opening of mature bolls, FIRESTORM may be tank mixed with the following products: DEF® defoliant, Dropp® defoliant, Prep™ PGR, Folex® defoliant, Accelerate® defoliant</li> <li>• Apply when 60% or more of the bolls are open and remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited.</li> <li>• Refer to tank mix product label for rate, directions, limitations and precautions.</li> </ul>
Harvest aid for defoliation and boll opening of stripper or spindle-harvested cotton	2.1 to 7.5 fl. oz. (0.05 to 0.18 lb a.i.)	<ul style="list-style-type: none"> <li>• Apply when 75% or more of the bolls are open and remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited. Slice bolls and inspect the seed for maturity.</li> <li>• FIRESTORM may be applied alone or tank mixed with the cotton harvest aid products listed above.</li> <li>• To avoid leaf sticking, apply FIRESTORM as a desiccant approximately 3 to 7 days after defoliation or a conditioning application and 7 to 14 days before harvest.</li> <li>• Cooler temperatures may cause longer waiting period between application of FIRESTORM as a desiccant and a subsequent defoliation/conditioning treatment.</li> <li>• Lower rates in the range may be necessary south of I-10 in Texas where temperatures are typically higher during defoliation.</li> </ul>
Late season harvest aid desiccation of stripper cotton or spindle-harvested cotton	11.2 to 21 fl. oz. (0.26 to 0.49 lb a.i.)	<ul style="list-style-type: none"> <li>• Use to desiccate regrowth occurring after defoliation or desiccation.</li> <li>• Apply when 85% of the bolls are open and the remaining bolls to be harvested are mature.</li> <li>• Development of immature bolls will be inhibited. Slice bolls and inspect the seed for maturity.</li> <li>• To avoid leaf sticking, apply FIRESTORM as a desiccant approximately 3 to 7 days after defoliation or a conditioning application and 7 to 14 days before harvest.</li> <li>• Lower rates in the range may be necessary south of I-10 in Texas where temperatures are typically higher during defoliation.</li> </ul>
Desiccation of regrowth	11.2 to 21 fl. oz. (0.26 to 0.49 lb a.i.)	<ul style="list-style-type: none"> <li>• Use to desiccate regrowth occurring after defoliation or desiccation.</li> <li>• Regrowth is difficult to control, therefore, thorough coverage with the full recommended rate is necessary.</li> <li>• Control is dependent upon growing condition and desiccation of small new growth may not always be complete.</li> <li>• Use higher rate if regrowth is excessive.</li> </ul>

Refer to the FIRESTORM federal label for additional cotton recommended uses and nonionic surfactant recommendations.

**Additional Precautions, Restrictions and Comments:**

- Because of extremes in environmental and plant conditions, it is advisable to apply the range of rates on a small block of cotton to determine the rate that best fits your needs.
- Do not pasture lactating dairy animals.
- Do not pasture livestock in treated fields or feed treated foliage.
- When combined with phosphate defoliants, observe livestock precautions listed on the phosphate label.
- Do not harvest within 7 days of application when used with phosphate or chlorate defoliants.

**Do not apply this product through any type of irrigation system.**

**This bulletin contains new or supplemental instructions for use of the product which may not appear on the package label.**

Indicate use status of Special Local Need, i.e., planned dates of use: From: June 15 To: October 30th		Received by EPA
Comments (attach additional sheet, if needed) SLN for harvest aid applications on cotton in Texas				

**Restricted Use Pesticide.** Due to acute toxicity. For retail sale to and use only by certified applicators or persons under their direct supervision and only for those uses covered by the certified applicator's certification.

# Firestorm®

**Defoliant and desiccant herbicide for the control of weeds and grasses and as a harvest aid.**

**Net  
Contents:**

- NEVER PUT INTO FOOD, DRINK OR OTHER CONTAINERS.
- IF SWALLOWED, TAKE IMMEDIATE ACTION AS PRESCRIBED IN FIRST AID.
- SYMPTOMS ARE PROLONGED AND PAINFUL.
- DO NOT USE OR STORE IN OR AROUND THE HOME.
- DO NOT REMOVE CONTENTS EXCEPT FOR IMMEDIATE USE.
- THE ODOR OF THIS PRODUCT IS FROM THE STENCHING AGENT WHICH HAS BEEN ADDED, NOT FROM PARAQUAT.

**Active Ingredient:**

paraquat dichloride (1,1'-dimethyl-4,4'-bipyridinium dichloride) ..... 43.8%

**Other Ingredients:** ..... 56.2%

**Total:** ..... 100.0%

Contains 3.0 pounds paraquat cation per gallon as 4.143 pounds salt per gallon. Contains stench (odor) and emetic.

**KEEP OUT OF REACH OF CHILDREN**

**DANGER/PELIGRO**  **POISON**

**Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)**

## FIRST AID

**Contains Paraquat, a Bipyridinium Herbicide**

**Have the product container or label with you when calling a poison control center or doctor, or going for treatment.**

<b>If swallowed</b>	<ul style="list-style-type: none"><li>• <b>Call a poison control center or doctor IMMEDIATELY for treatment advice.</b></li><li>• <b>SPEED IS ESSENTIAL.</b> Immediate medical attention is required. If available, give an absorbent such as activated charcoal, bentonite or Fuller's Earth.</li><li>• Have person sip a glass of water if able to swallow.</li><li>• Do not induce vomiting unless told to by a poison control center or doctor.</li><li>• Do not give anything by mouth to an unconscious person.</li></ul>
<b>If inhaled</b>	<ul style="list-style-type: none"><li>• Move person to fresh air.</li><li>• The odor of this product is from the stenching agent, which has been added, not from the paraquat.</li><li>• If person is not breathing, call 911 or an ambulance.</li><li>• Call a poison control center or doctor for treatment advice.</li></ul>
<b>If in eyes</b>	<ul style="list-style-type: none"><li>• Hold eye open and rinse slowly and gently with water for 15-20 minutes.</li><li>• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.</li><li>• Call a poison control center or doctor for treatment advice.</li></ul>
<b>If on skin or clothing</b>	<ul style="list-style-type: none"><li>• Take off contaminated clothing.</li><li>• Rinse skin immediately with plenty of water for 15-20 minutes.</li><li>• Call a poison control center or doctor for treatment advice.</li></ul>

### NOTE TO PHYSICIAN

Administer either activated charcoal (100g for adults or 2g/kg body weight in children) or Fuller's Earth (15% solution; 1 liter for adults or 15ml/kg body weight in children). NOTE: The use of gastric lavage without administration of an absorbent has not shown any clinical benefit. Do not use supplemental oxygen. Eye splashes from concentrated material should be treated by an eye specialist after initial treatment. With the possibility of late onset corneal ulceration, it is advised that patients with paraquat eye injuries are reviewed by an eye specialist the day after first presentation. Use treatment that is appropriate for chemical burns. Intact skin is an effective barrier to paraquat; however, contact with irritated or cut skin or repeated contact with intact skin may result in poisoning.

### HOT LINE NUMBERS

**For 24-Hour Medical Emergency Assistance (Human or Animal), Call 1-877-800-5553. For Chemical Emergency Assistance (Spill, Leak, Fire, Accident), Call CHEMTREC 1-800-424-9300. For Chemical Safety Data and Information, Call 1-866-430-2775, or check our web site at [www.chemtura.com](http://www.chemtura.com)**

## PRECAUTIONARY STATEMENTS

### HAZARDS TO HUMANS AND DOMESTIC ANIMALS

**DANGER.** May be fatal if swallowed. Fatal if inhaled. Do not breathe spray mist. Wear a dust mist respirator. Causes irreversible eye damage. Wear protective eyewear. Do not get in eyes or on clothing. Harmful if absorbed through skin. Avoid contact with skin. **IMPORTANT:** Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal irritation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

#### Personal Protective Equipment (PPE)

**Applicators and other handlers (other than mixers and loaders) must wear:**

Long-sleeved shirt and long pants; Chemical resistant gloves – Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton); Shoes plus socks; Protective eyewear; A dust mist NIOSH-approved respirator with any N, R, P, or HE filter.

#### Mixers and loaders must wear:

Long-sleeved shirt and long pants; Chemical resistant gloves – Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton); Shoes plus socks; Dust mist NIOSH-approved respirator with any N, R, P, or HE filter; Chemical resistant apron; Face shield.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

**Engineering Controls:** When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

### User Safety Recommendations

#### Users should:

- Wash hands before eating, drinking, and chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

### ENVIRONMENTAL HAZARDS

This product is **toxic to wildlife**. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash waters.

Paraquat dichloride is **toxic to nontarget crops and plants** if off-target movement occurs because it desiccates all green plant tissue. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Refer to the local state laws, regulations, guidelines, and spray drift information contained in the Directions for Use section for proper application to avoid off-target movement. Do not apply under conditions involving possible drift to food, forage, or other plantings that might be damaged or the crops thereof rendered unfit for sale, use, or consumption. Do not apply when weather conditions favor drift from treated areas. To avoid drift, do not make aerial application during periods of thermal inversion.

### PHYSICAL AND CHEMICAL HAZARDS

This product is **mildly corrosive to aluminum** and produces hydrogen gas which may form a highly combustible gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. The product is compatible with high density polyethylene and rubber-lined steel containers.

### DIRECTIONS FOR USE

**Restricted Use Pesticide.** It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**Do not use around home gardens, schools, recreational parks, golf courses or playgrounds.**

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to use of this product that are covered by the Worker Protection Standard.

**For preplant or preemergence (broadcast or banded), chemical fallow, postemergence directed spray applications, early postemergence broadcast in peanuts and dormant season applications, and "between cutting" applications in alfalfa:** Do not enter or allow worker entry into treated areas during the **restricted-entry interval (REI) of 12 hours**.

**For harvest aid and desiccation application:** Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of **24 hours**.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Shoes plus socks
- Protective eyewear
- Chemical resistant gloves - Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton).

### NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

**DO NOT** enter or allow others to enter the treated area until sprays have dried.

**AVOID** working in spray mist.

Keep all unprotected persons out of operating areas or vicinity where there may be danger of drift.

Certain states may require more restrictive reentry intervals; consult your State Department of Agriculture for further information.

## STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

**Pesticide Storage:** Store in original container and place in a locked storage area. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. Store at temperatures above 32°F. For Emergencies involving a Spill, Leak, Fire, Exposure, or Accident, contact: CHEMTREC at (800) 424-9300.

**Pesticide Disposal:** Pesticide wastes are acutely hazardous. Improper disposal of excess, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

### Container Disposal:

**Do not reuse container as container is not safe for food, feed or drinking water!**

Plastic containers: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Minibulk containers: Return empty containers for reconditioning.

## GENERAL INSTRUCTIONS AND INFORMATION

Do not apply this product through any type of irrigation system.

**When FIRESTORM® is applied at less than 10 gallons per acre finished spray volume, a drift control or spray deposition additive SHOULD be used.** Always refer to the additive label for rates of applications, directions for use, limitations, and restrictions.

### SPRAY DRIFT INFORMATION

AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following DRIFT MANAGEMENT REQUIREMENTS must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.

2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45°.

Where states have more stringent regulations, they shall be observed.

The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

### AERIAL DRIFT REDUCTION ADVISORY INFORMATION Information on Droplet Size

The most effective way to reduce drift potential is to apply large droplets. The best management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environment conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

#### Controlling Droplet Size

- **Volume** - Use high flow rate nozzles to apply the highest spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** - Do not exceed the nozzle manufacturer's recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Number of Nozzles** - Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation** - Orienting nozzles so that the spray is

released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.

- **Nozzle Type** - Use a nozzle that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

#### Boom Length

For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

#### Application Height

Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making application at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

#### Swath Adjustment

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

#### Wind

Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

#### Temperature and Humidity

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

#### Temperature Inversions

Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on

nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

## GENERAL INFORMATION

### APPLICATION

FIRESTORM is a contact herbicide for control or suppression of a broad spectrum of emerged weeds including most small annual broadleaf and grass weeds. It can also be used to suppress perennial weeds by destroying green foliage and as a desiccant/defoliant at harvest.

Complete coverage of target weeds is necessary to get good control because FIRESTORM is a contact-type herbicide. It is also necessary to obtain complete coverage for good crop desiccation and defoliations. Undesirable weed control and undesirable crop desiccation/defoliation will result if improper application technique and/or application to large, stressed, or mown weeds are made. Refer to the following details for specific application instructions.

FIRESTORM™ is a liquid formulation containing 3 lbs. of active ingredient per gallon. It contains a nontoxic odor to help prevent accidental ingestions. It also contains an emetic (an agent which will induce vomiting if the product is swallowed).

Thorough coverage of all green foliage is required for efficacious weed control and crop defoliation and desiccation because FIRESTORM requires actively growing green plant tissue to function. Drought-stressed weeds, weeds with little green foliage (i.e., mowed or cut weeds), or mature woody bark of trees and vines are unaffected by application with FIRESTORM.

There is no residual soil activity to affect later-planted crops or later germinating weeds because clay and organic matter rapidly tie up FIRESTORM.

### ROTATIONAL CROPS

After the last application FIRESTORM, all rotational crops may be planted immediately.

### RAINFASTNESS

Rain occurring 30 minutes or more after application will have no effect on the activity of FIRESTORM because it is rapidly absorbed by the weed foliage.

### USE OF A NONIONIC SURFACTANT OR CROP OIL CONCENTRATE

**The following should always be added and be used at the recommended rates or there will be a reduction in efficacy of FIRESTORM.**

**Nonionic Surfactant:** Either add a nonionic surfactant containing 50-74% surface-action agent at 0.25% v/v (2 pts./100 gals.), or add nonionic surfactant containing 75% or more surface-active agent at 0.125% v/v (1 pt./100 gals.), of the finished spray volume for ground applications. Add a nonionic surfactant at 0.25% v/v (2 pts./100 gals.) of the finished spray volume for aerial applications.

### Sensitive Areas

The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

**Crop Oil Concentrate:** For ground applications, add a non-phytotoxic crop oil concentrate that contains 15-20% approved emulsifier, with 1.0% v/v (1 gal./100 gals.) of the finished spray volume. Add 1 pt. of crop oil concentrate per acre for aerial applications. **For cotton harvest aid, do not use crop oil concentrate when using FIRESTORM.**

### NOZZLE SELECTION

The use of flat-fan nozzles is the most effective application of FIRESTORM. The use of flood nozzles may result in a reduction of weed control due to inadequate coverage because they produce large uneven droplets.

**Use only flat fan nozzles when spraying less than 20 gallons of spray carrier per acre using the following table.**

Table 1. Nozzle Type and Spray Pressures and Setup

	Nozzle Type	
	Flat Fan	Flood
Maximum Size	8	15
Spray Pressure (at nozzle)	30-50 psi	30-50 psi
Maximum Nozzle Spacing	30"	40"
Direction of Spray Pattern	Down	Down
Maximum Speed	10 mph	10 mph
Spray Overlap (at each edge)	30%	50%

Reduced control will result if nozzles, pressures, or setups differ from the above chart.

### SPRAY CARRIER

FIRESTORM may be inactivated by muddy water, or suspension-type fertilizers containing clay. Therefore, always use clean water (free of mud or clay), clear liquid nitrogen, or complete clear liquid fertilizers as the carrier when spraying this product. Never use suspension-type fertilizers containing clay as the spray carrier. Always use the higher rate of FIRESTORM and surfactant if using a complete clear liquid fertilizer containing high phosphate levels as the spray carrier.

Note: It is important that when using liquid fertilizers such as 28% N as a spray carrier, that nonionic surfactant still be used with FIRESTORM. The use of liquid fertilizer carriers are not substitutes for surfactants.

### RATES OF FIRESTORM

With each use, follow rates listed in the following tables. When weeds are larger or are dense, use the higher label rates. For use as a harvest aid, use higher rate when crop vegetation is dense. Do not exceed 0.50 lbs. a.i./A in a minimum of 30 gallons of spray for broadcast applications with backpack sprayers.

### SPRAY VOLUME

With each use, follow minimum spray volumes listed in the

following tables. Spray volumes should be increased as necessary to obtain complete coverage of the target weed or plant without runoff from the foliage, because **the volumes listed are minimum volumes only.**

TARGET WEEDS SHOULD NOT EXCEED SIX INCHES IN HEIGHT WHEN SPRAYING LESS THAN 20 GALLONS OF SPRAY CARRIER PER ACRE.

#### APPLICATION TIMING

Applications should be made to small emerged weeds. Larger weeds more than 6 inches in height may be more difficult to control than weeds 1-6 inches in height. If possible, when green foliage is removed either from grazing or mowing, allow the weeds to grow 2-4 inches in height. Also, during harvesting forage or grain crops before spraying, weeds present in the field are also cut. Therefore, raise cutter bars as high as possible from the ground to cut stubble and weeds at a greater height, allowing sufficient green foliage to remain for applications.

#### BURNDOWN OF GRASS COVER CROPS OR VOLUNTEER CEREALS

The best results occur for control of grass cover crops or volunteer cereals when FIRESTORM is applied prior to tillering or after boot stage, especially with a wheat cover crop or volunteer wheat. Complete control may not be achieved with treatments made between tillering and boot stage. Complete control of perennial cover crops should not be expected.

#### ENVIRONMENTAL CONDITIONS

This product is active over a wide range of environmental conditions such as cool (below 55°F), cloudy or overcast weather. However these conditions will slow the activity of FIRESTORM.

#### SPOT SPRAYING

Refer to the following table if only small areas are to be sprayed with labeled applications.

**Mixing Instructions for Small Quantities for Spot Spraying**

If the Broadcast Rate Per Acre for FIRESTORM is:	Add the Following Amount of FIRESTORM to 1 Gallon of Water
1 1/2 pts.	1/3 fl. oz.
2 pts.	3/8 fl. oz.
2 1/2 pts.	1/2 fl. oz.
3 pts.	2/3 fl. oz.

Add 1/3 - 1/2 fl. oz. of a nonionic surfactant for each gallon of spray at all times. Thoroughly wet the foliage, but not to the point of runoff when spot spraying in this manner.

#### TANK MIXING: ENHANCED BURNDOWN OF DIFFICULT-TO-CONTROL WEEDS AND FOR RESIDUAL WEED CONTROL

##### Photosynthetic Inhibitor Herbicides

To control difficult weeds, tank mix FIRESTORM with other herbicides. The addition of other photosynthetic inhibitors (PSI) herbicides will slow the activity of FIRESTORM. This allows FIRESTORM to thoroughly distribute throughout a treated leaf, thus achieving better control than if FIRESTORM was applied alone.

FIRESTORM may be applied in tank mixture with the following PSI herbicides:

AAtrex® Herbicide  
Atrazine Herbicide  
Bicep Lite II MAGNUM® Herbicide  
Bicep MAGNUM® Herbicide  
Canopy® Herbicide  
Lariat® Herbicide  
Lexone® Herbicide  
Linex® Herbicide  
Lorox® Herbicide  
Lorox Plus™ Herbicide  
Princep® Herbicide  
Sencor® Herbicides

Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.

#### Improved Weed Control with PSI's

The addition of a PSI herbicide will help improve the control of difficult weeds listed below. Make a second application for best results.

Barnyardgrass	Marestail
Broadleaf signalgrass	Morningglory
Cheatgrass	Pennsylvania smartweed
Cocklebur	Perennial weeds
Fall panicum	(suppression only)
Giant ragweed	Prickly lettuce
Knotweed	Sedges
Kochia	Tansymustard
Lambsquarters	Velvetleaf
Malva (cheeseweed)	Volunteer wheat

#### Improved Control of Perennial and Annual Broadleaf Weeds

Tank mixing with labeled 2,4-D ester (Low Volatile), 2,4-DB or Banvel® herbicide will help improve control when perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc., or difficult to control annual broadleaf weeds such as giant ragweed or morningglory are present. Reduced grass control may be achieved when tank mixing the amine formulation of 2,4-D with FIRESTORM.

#### Order of Tank Mixing

It is advisable to tank mix FIRESTORM and other listed products as follows:

1. Fill spray tank 1/2 full with clean water or other approved carriers such as clear liquid fertilizer.
2. Begin tank agitation and continue throughout mixing and spraying.
3. Add dry formulations (WP, DF, etc.) to tank.
4. Add liquid formulations (SC, EC, L, etc.) to tank.
5. Add FIRESTORM to tank.
6. Add nonionic surfactant to tank.
7. Fill remainder of spray tank.

Always read other pesticide products labels for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

It is advisable to perform a jar test to check physical compatibility when using different formulation of the herbicides listed on this label.

## GENERAL PRECAUTIONS AND RESTRICTIONS

### EQUIPMENT

FIRESTORM® is **corrosive to aluminum**. Thoroughly flush all aluminum spray equipment and aluminum aircraft structures that are exposed to spray solution or spray drift with water immediately after use.

The activity of FIRESTORM may be reduced in dry areas where dust stirred up by high winds or equipment tires can coat weed or plant leaves. Therefore, avoid applications in extremely dusty conditions.

### LIMITATIONS AND PRECAUTIONS

- **Unless otherwise indicated, FIRESTORM will severely injure or kill crop plants emerged at time of application if they come in contact with sprays.**
- Do not pasture livestock in treated fields or feed treated foliage in cotton when this product is used as a cotton harvest aid.
- **DO NOT USE AROUND HOME GARDENS, SCHOOLS, RECREATIONAL PARKS, OR PLAYGROUNDS.**
- Do not apply to soils lacking clay minerals such as peat, muck, pure sand, artificial planting media for preplant and preemergence (to the crop) uses.
- To enable maximum weed and grass emergence prior to treatment, seedbeds and plantbeds should be formed as far ahead of planting and treatment as possible.
- Avoid disturbing soil when seeding or transplanting.
- Transplanted plants may become damaged when they come in contact with plastic mulch used for preplant weed control and that has been treated with this product. To prevent damage to the crop, sufficient wash-off such as rainfall or sprinkler irrigation prior to planting may be needed.
- FIRESTORM will be ineffective in controlling or suppressing weeds and grasses that have emerged after application.

## APPLICATION INSTRUCTIONS

Crop	Weeds	Use Pattern	FIRESTORM™ Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
<b>ALFALFA</b> (California only) New seedlings		Broadcast	0.7-1.3 pts. See Table 2	Ground: 10 gals.  Air: 5 gals.	70	<ul style="list-style-type: none"> <li>• Do not make more than one application per year.</li> <li>• Applications should be made during late winter or early spring.</li> <li>• Do not cut or harvest within 70 days after application.</li> <li>• Alfalfa foliage present at time of application will be burned.</li> <li>• Replanting may be needed due to the reduction of seedling stands.</li> <li>• Do not apply to seedling alfalfa grown for seed.</li> </ul>
<b>ALFALFA</b> Preplant or Preemergence (No-till or conventional planting)		Broadcast or Banded Over-Row	1.7-2.7 pts.	Ground: 10 gals.  Air: 5 gals.	—	<ul style="list-style-type: none"> <li>• Do not make more than 2 applications per year.</li> <li>• Apply prior to emergence of the crop. Avoid disturbing soil when seeding.</li> <li>• Crop plants emerged at time of application will be killed.</li> </ul>
<b>ALFALFA</b>  Dormant season Established plantings  Region A - See table at end of Alfalfa section	Weeds, including bluegrass, chickweed, henbit, downy brome, ryegrass, cheatgrass, dogfennel, tansymustard, London rocket, sowthistle, rescue brome, wild oats, and other winter annuals; and suppression of perennial weeds.	Broadcast	1.3-2.0 pts.	Ground: 10 gals.  Air: 5 gals.	42	<ul style="list-style-type: none"> <li>• Do not make more than one application per year.</li> <li>• <b>Fall regrowth:</b> Do not apply if regrowth after last fall cutting is greater than 6".</li> <li>• <b>Spring regrowth:</b> Do not apply if regrowth before first cutting is greater than 2".</li> <li>• After the crop is dormant, apply to well-established stands that are at least 1-year old.</li> <li>• Yield of first cutting may be reduced because alfalfa foliage present at the time of application will be burned.</li> <li>• Do not cut or harvest within 42 days after application.</li> <li>• For improved and longer-lasting weed control, tank mix with metribuzin (Lexone® or Sencor®). Always refer to the metribuzin label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.</li> </ul>

Crop	Weeds	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
<b>ALFALFA</b>  Dormant season Tank Mix with Velpar® L-Herbicide Region A - See table at end of Alfalfa section	Weeds including chickweed, downy brome and tansy- mustard.	Broadcast	0.7-1.3 pts.	Ground: 10 gals.  Air: 10 gals.	42	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year.</li> <li>When weeds are less than 4 inches tall apply at 0.7 pt. rate FIRESTORM</li> <li>Mix FIRESTORM with 1-2 qts. of Velpar® L per acre.</li> <li>Use lower rate of Velpar® L on loamy sands or sandy loams. Always refer to the Velpar® L label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.</li> <li>During the dormant season, make one application to established alfalfa stands.</li> <li><b>Fall regrowth:</b> Do not apply if regrowth after last fall cutting is greater than 6".</li> <li><b>Spring regrowth:</b> Do not apply if regrowth before first cutting is greater than 2".</li> <li>Do not apply to alfalfa during the first season after seeding.</li> <li>Temporary chlorosis may occur on alfalfa regrowth.</li> <li>Increased chances of crop injury may occur if stress which may be caused in part by low fertility, disease, insects, winterkill, over cutting, drought or frost.</li> <li>DO NOT USE on gravelly or rocky soils, exposed subsoils, hardpan, sand or poorly drained alkaline soils as crop injury, including mortality, may result.</li> <li>Do not cut or harvest within 42 days of application.</li> </ul>
<b>ALFALFA</b>  Dormant Season  On established plantings: Region B - See table at end of Alfalfa section. However do not make more than 2 applications per year or exceed a total of 1.3 pints per acre.</li> <li>Apply when at least 80% of the pods are yellowing and mostly ripe and when leaves are no more than 40% of bush type peas or beans or 30% of vine type peas or beans are green.</li> <li>Do not apply when weather conditions favor spray drift. To reduce drift, a drift control agent may be included.</li> <li>Not registered for use in dry beans and dry peas in California.</li> </ul>
<b>BERRIES</b> Blackberry Blueberry Boysenberry Currant Elderberry Gooseberry Huckleberry Loganberry Raspberry	Postemergence Directed Spray	1.3-2.7 pts.	Ground: 50 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 5 applications per year.</li> <li>New canes or shoots can be injured. Therefore, apply before their emergence.</li> <li>To prevent crop injury from spray mist, apply as a coarse spray.</li> </ul>
<b>CACAO</b>	Directed Spray	1.3-2.7 pts.	Ground: 50-200 gals.	1	<ul style="list-style-type: none"> <li>Do not make more than 5 applications per year.</li> <li>Apply when weeds are succulent and growth is from 1-6".</li> <li>Retreatment or spot treatments may be necessary for mature woody weeds, late-germinating weeds and grasses and for perennials.</li> <li>Use a shield for young trees to prevent sprays from contacting cacao plants, as injury may result.</li> <li>Do not spray under windy conditions.</li> <li>Do not graze treated areas or feed treated cover crops to livestock.</li> </ul>
<b>CASSAVAS, TA- NIERS &amp; YAMS</b> (Puerto Rico only)	Shielded Post Directed Spray	1.3 pts.	Ground: 50 gals.	90	<ul style="list-style-type: none"> <li><b>Cassavas and Taniers:</b> Do not make more than 3 applications per year.</li> <li><b>Yams:</b> Do not make more than 2 applications per year.</li> <li>Make applications when weeds are succulent and growth is 1-6".</li> <li>Prevent spray from contacting crop to prevent injury to crop.</li> <li>Do not spray under windy conditions.</li> <li>Do not graze treated areas or feed treated forage to livestock.</li> </ul>

## General Information for Chemical Fallow

- As the density of stubble, crop residue or weeds increases, use higher spray volumes for better coverage.
- To control volunteer wheat or downy brome, fall-applied treatments generally work best with FIRESTORM. If possible, tank mix with atrazine for maximum burndown and residual control.
- Apply from immediately after harvest up to emergence of the newly seeded crop as a broadcast or band treatment.
- Before applying FIRESTORM, cut wheat as high as possible to avoid cutting weeds too short, and allow the weeds to grow at least 2-3" after harvest.
- The addition of dicamba (Banvel®) or 2,4-D ester (Low Volatile) may aid in the suppression of emerged perennial broadleaf weeds and large annual broadleaf weeds. Always refer to the product label(s) for 2,4-D ester (Low Volatile), dicamba (Banvel®), or residual herbicide for rates of applications, directions for use, limitations, and restrictions.
- It is permissible to tank mix with registered residual herbicide combinations other than listed for extended weed control during the fallow period.
- Weeds and grasses emerging after application and weeds taller than 6 inches will not be controlled.
- Crop plants emerged at the time of application will be killed.
- The minimum total spray per acre allowed is 5 gallons for ground and 5 gallons for air applications.
- Apply 5-60 gallons spray mix per acre by ground application. When applying at less than 10 GPA by ground:
  - Do not apply with floaters or exceed a speed of 10 mph.
  - Apply with flat fan nozzles at 30-40 psi.
  - Apply only in a tank mix with atrazine at a minimum of 0.5 lb. a.i./acre.
  - By air: apply in 5-10 gals. of spray mix per acre.

Crop	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions

## COTTON Harvest Aid Use Restrictions

- Do not make more than 4 applications per year.
- Do not pasture livestock in treated fields or feed treated foliage.
- Do not apply to cotton within 3 days before harvest.
- Repeat application if necessary. Do not exceed a total of 1.3 pts./A as a harvest aid.
- May be tank mixed with other cotton harvest aid materials known to be effective by a local expert. Unless otherwise instructed in this label, always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.
- FIRESTORM can be applied in a tank mix with methyl parathion and/or Karate® insecticide. Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.
- Nodes above cracked bolls (NACB) timing is for guidance and is not intended to restrict the local expert in their use of the product.

Crop	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions

Slice bolls and inspect the seed for maturity.</li> <li>South of Interstate-10 in Texas, where temperatures are typically higher during defoliation, lower rates in the range may be necessary.</li> <li>Delay desiccation application of FIRESTORM approximately 3-7 days to minimize leaf sticking if a defoliation or conditioning application has been made.</li> <li>May be tank mixed with other harvest aid materials known to the local expert to be effective.</li> </ul>
<b>COTTON</b>  Desiccation of regrowth	Broadcast	0.75-1.25 pts.	Ground: 10 gals.  Air: 5 gals.	3	<ul style="list-style-type: none"> <li>Do not make more than 4 applications per year.</li> <li>Use to desiccate regrowth occurring after defoliation or desiccation.</li> <li>Because regrowth is difficult to control, thorough coverage with the full rate is necessary.</li> <li>Control is dependent on growing conditions and desiccation of small new regrowth may not always be complete.</li> <li>If regrowth is excessive, use higher rate.</li> </ul>
<b>EASTER LILIES</b> (Field grown)	Preemergence	1.7-2.7 pts.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not exceed two applications per year.</li> </ul>

Crop	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
<b>FALLOW LAND</b>  Prior to planting of any crops.	Preplant Broadcast to Fallow Land	1.0-2.7 pts.	Ground: 10 gals.  Air: 5 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year, during the fallow period.</li> <li>Fallow land may be between operations such as disking, ripping, plowing, leveling, irrigating or listing for ground preparation purposes.</li> <li>Use for the control of weeds such as bluegrass, chickweed, henbit, downy brome, ryegrass, cheatgrass, dog fennel, tansy mustard, London rocket, sowthistle, rescue brome, wild oats, volunteer cereals and other winter annuals and for suppression of perennial weeds or sedges.</li> <li>For weeds approaching the maximum size of 6", the higher rate may be used.</li> <li>No more than 2 applications should be made during the fallow period.</li> <li>Prior to application allow maximum weed emergence to maximize the benefit of this use.</li> <li>Adhere to the preharvest intervals and other crop specific restrictions for planted crops elsewhere on this label.</li> </ul>
<b>GRASSES</b> (For seed) (For use in seedbed preparation)	Preplant, at Planting, or Preemergence	1.3-2.7 pts.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>Prepare the seedbeds and allow weeds to germinate.</li> <li>Apply FIRESTORM when weeds are at the 3-5 leaf stage.</li> <li>Applications may be repeated as necessary (but only up to 3 applications per year) prior to grass emergence.</li> <li>Do not graze treated areas or use the seed or straw from treated areas for animal feed or bedding.</li> </ul>
<b>GUAR</b> (Preharvest desic- cation)	Preharvest	1.3 pts.	Ground: 10 gals.	4	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>Apply after the pods are fully mature.</li> <li>Do not graze treated areas or use the treated forage for animal feed.</li> </ul>
<b>GUAVA</b>	Directed Spray	2.5 pts.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 4 applications per year.</li> <li>Do not allow spray to contact green stems, fruit or foliage.</li> <li>Do not graze treated areas.</li> <li>Do not feed cover crops grown in treated areas to livestock.</li> <li>Retreatment or spot spraying may be necessary for mature woody weeds, late-germinating weeds and grasses, and perennials.</li> </ul>
<b>HOPS</b> (ID, OR, & WA only)	Directed Spray and/or Suckering and Stripping.	1.3 pts.	Ground: 10 gals.	14	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>Retreatment of spot treatment may be necessary.</li> <li>Do not allow spray to contact green stems, foliage, flowers, or cones as injury may result.</li> <li>Do not allow animals to graze in treated hopyards.</li> <li>Silage and hop vine refuse may be fed to livestock.</li> <li>Spray only the basal 2 ft. of the vines for sucking and stripping. Repeat as necessary, but only up to 3 applications per season.</li> <li>Experience with varieties other than Cascade, Yakima Cluster, and Bullion is limited. If using FIRESTORM on other varieties than these, test the use pattern on a small number of vines of each variety to determine sensitivity to injury. Do not use on unlisted varieties if unacceptable crop injury occurs.</li> <li>Chemical Pruning: Spray when vines are less than 3 ft. tall to burn back existing vines and obtain even emergence of subsequent vines.</li> <li>APPLICATION TO HOP VINES LESS THAN 6 FT. TALL MAY CAUSE UNACCEPTABLE INJURY.</li> </ul>
<b>LENTILS</b>  NOT REGISTERED FOR USE ON LENTILS IN CALI- FORNIA.	Harvest Aid	0.8-1.3 pts.	Ground: 20 gals.  Air: 7 gals.	7	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year.</li> <li>Add nonionic surfactant at 0.25% v/v (2 pts./100 gals.) of the finished spray volume.</li> <li>May also be applied as a split application. <b>DO NOT</b> make more than 2 applications or exceed a total of 1.3 pts./A. The split application may improve coverage.</li> <li>Apply when crop is mature and at least 80% of the pods are yellowing and mostly ripe with no more than 30% of the leaves still green in color.</li> <li><b>DO NOT</b> apply when weather conditions favor spray drift. To reduce spray drift a drift control agent may be included.</li> </ul>

Crop	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
<b>MINT</b> (Peppermint, Spear- mint)	Dormant Season	1.3-2.0 pts.	Ground: 10 gals.  Air 5 gals.	--	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year.</li> <li>For suppression of weeds such as groundsel, chickweed, downy brome, bluegrass, Italian ryegrass, prickly lettuce.</li> <li>Apply when crop is dormant before spring growth begins and when weeds are less than 6" tall.</li> <li>Do not apply more than 2.0 pts./A per dormant season.</li> <li>May be tank mixed with Sinbar® Herbicide (terbacil) weed killer for improved contact activity and residual control of Italian ryegrass, prickly lettuce and groundsel. Apply this tank mixture no more than once per season. Always refer to Sinbar® (terbacil) label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.</li> </ul>
<b>ONIONS (seeded) AND GARLIC</b>	Preplant/ Preemer- gence	1.7-2.7 pts.	Ground: 10 gals.	60 200 (CA only)	<ul style="list-style-type: none"> <li>Do not make more than 1 application per year.</li> <li>For heavy weed infestations or wild oat control use the higher rate. Apply only one application per season at the 2.7 pts./A dosage.</li> <li>Allow maximum weed and grass emergence prior to treatment but apply prior to crop emergence.</li> <li>Apply a maximum of 2.7 pts./A per season.</li> </ul>
<b>PASSION FRUIT</b>	Directed Spray	2.5 pts.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 5 applications per year.</li> <li>If bark is still green at application time, use a shield or wrap vine.</li> <li>Pick all fruit off the ground prior to application if application is to be made during harvest season.</li> <li>Do not allow animals to graze on treated areas.</li> <li>It may be necessary to retreat or spot treat.</li> </ul>
<b>PEANUTS</b>	Broadcast At Ground Crack Postemergence	5.4-10.8 fl. oz.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year.</li> <li>To control or suppress small (1-6") emerged annual grass and broadleaf weeds in peanuts at ground crack. A second application may be made up to 28 days after ground crack.</li> <li>For at ground crack use, FIRESTORM can be tank mixed with Pursuit® Herbicide or Dual Magnum® for residual weed control.</li> <li>Always refer to the Pursuit® or Dual Magnum® label for a list of weeds controlled, application rates, necessary precautions, and use limitations.</li> <li>Make no more than 2 applications per season and do not apply a total of more than 10.8 fl. oz. of product per acre per season.</li> <li>Crop foliage sprayed will be injured in the form of bronzing and crinkling, but the crop will recover and develop normally.</li> <li>Do not apply by air.</li> </ul>
<b>PEANUTS</b> Basagran® Herbicide Tank Mix	Broadcast At Ground Crack Postemergence	5.4-10.8 fl. oz.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year.</li> <li>Tank mix FIRESTORM with Basagran® at 1 pt./A. for improved control of weeds such as cocklebur, bristly starbur, smartweed and prickly sida.</li> <li>This tank mix can be applied at the ground crack stage of peanuts. A second application may be made up to 28 days after ground crack.</li> <li>Make no more than 2 applications per season and do not apply a total of more than 10.8 fl. oz. of product per acre per season.</li> <li>Crop foliage sprayed will be injured in the form of bronzing and crinkling, but the crop will recover and develop normally.</li> <li>Always refer to the Basagran® label for weeds controlled, rates of applications, directions for use, limitations, and restrictions.</li> <li>If peanuts show injury (leaf phytotoxicity and/or plant stunting) produced by any other herbicide treatment, do not apply this tank mix as injury may be enhanced and/or prolonged.</li> <li>During prolonged periods of drought or unseasonably cold weather do not apply this tank mix as unsatisfactory weed control may result.</li> <li>Do not apply by air.</li> </ul>

Crop	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
<b>PEANUTS</b>  Butyrac® Herbicide or Butoxone® 200 Herbicide Tank Mix	Broadcast Postemergence	5.4-10.8 fl. oz.	Ground: 10 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 2 applications per year.</li> <li>For improved control of weeds such as cocklebur, sicklepod and morningglory, tank mix FIRESTORM with 8-16 oz. (0.125-0.25 lbs.) per acre of Butyrac® or Butoxone® 200.</li> <li>Do not apply a total of more than 10.8 fl. oz. of product per season and make no more than 2 applications per season</li> <li>Crop foliage sprayed will be injured in the form of bronzing and crinkling but the crop will recover and develop normally.</li> <li>Always refer to the Butyrac® or Butoxone® 200 labels for weeds controlled, rates of applications, directions for use, limitations, and restrictions.</li> <li>Do not apply by air.</li> </ul>
<b>PIGEON PEAS</b> (Puerto Rico only)	Directed Spray	1.3 pts.	Ground: 10 gals.	60	<ul style="list-style-type: none"> <li>Do not make more than 1 application per year.</li> <li>Avoid contact with pigeon pea foliage.</li> <li>Do not make more than 1 application per season.</li> <li>Do not graze treated areas or feed treated forage to livestock.</li> <li>Cannery waste can be fed to livestock.</li> </ul>
<b>PINEAPPLE</b>	Directed Spray	1.3-2.7 pts.	Ground: 10 gals.	20	<ul style="list-style-type: none"> <li>Do not exceed 3 applications per season.</li> <li>More mature weeds may require retreatment.</li> </ul>
<b>POTATO</b>	Preplant or Preemergence Broadcast	0.7-1.3 pts.	Ground: 10 gals.  Air: 5 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>Apply up to ground cracking stage, before potatoes have emerged.</li> </ul>
<b>POTATO</b> (California, Washington, Oregon, Idaho only; used alone)	Preplant Broadcast	0.4-0.7 pts.	Ground: 10 gals.  Air: 5 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>For control of volunteer barley in preformed seedbeds.</li> </ul>
<b>POTATO</b> Fresh Market Only  Preharvest vine killing and weed desiccation.  For Use Only in the states of: Colorado, Delaware, Idaho, Illinois, Indiana, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Nebraska, Nevada, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Dakota, Utah, Washington, Wisconsin and Wyoming	Broadcast	0.7-1.3 pts.	Ground: 20 gals.	3	<p><b>For Fresh Market Potatoes Only.</b> (Fresh Market Potatoes include potatoes that are sent directly from the field to a consumer, grocery store, or processor for use.)</p> <ul style="list-style-type: none"> <li><b>DO NOT</b> make more than 2 applications per year.</li> <li><b>DO NOT</b> use on potatoes that will be stored as tuber decomposition may result.</li> <li>Potatoes must be harvested promptly after desiccation and processed or consumed immediately.</li> <li><b>DO NOT</b> apply to drought stressed potato vines.</li> <li><b>DO NOT</b> use to desiccate the vines of seed potatoes as seed pieces may fail to germinate and grow normally.</li> <li><b>DO NOT</b> pasture livestock in treated potato fields.</li> <li><b>DO NOT</b> exceed 2.6 pts./A per season.</li> <li>Begin application when leaves begin to turn yellow.</li> <li>Immature potato foliage is tolerant to FIRESTORM. However, desiccation will not be complete under this condition.</li> <li>Use 1.3 pts./A rate where quick vine kill is desired.</li> <li>For dense vine growth, use 2 applications of 0.6 pt/A. Split applications must be applied a minimum of five days apart.</li> </ul>

Crop	Use Pattern	FIRESTORM Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
<b>RICE</b>	Preplant or Preemer- gence Broadcast	Weeds 1-3": 1.3-1.7 pts.  Weeds 3-6": 1.7-2.0 pts.  Weeds 6": 2-2.7 pts.	Ground: 10 gals.  Air: 5 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>Apply as a broadcast spray before, during or after planting, but before crop emergence. When vegetation is dense, use higher rates and spray volumes.</li> <li>Seeding should be done with a minimum amount of soil distur- bance.</li> <li>This product will not control weeds and grasses emerging after application. Crop plants emerged at time of application will be killed.</li> <li>FIRESTORM may be tank mixed with other herbicides registered for this use for improved or extended weed control. Always refer to the tank mix product label(s) for weeds controlled, rates of applications, directions for use, limitations, and restrictions.</li> <li>Do not flood/flush within 48 hours of application in order to ensure complete kill of vegetation. If cool, cloudy and/or wet weather delays speed of kill, do not flood/flush until complete kill is evident.</li> </ul>
<b>SAFFLOWER</b>	Preplant or Preemer- gence Broadcast or Banded Over Row	1.7-2.7 pts.	Ground: 10 gals.  Air: 5 gals.	—	<ul style="list-style-type: none"> <li>Do not make more than 3 applications per year.</li> <li>Apply before, during and after planting but before crop emer- gence.</li> </ul>

## RESIN SOAKING

Pines including Loblolly, Shortleaf, Longleaf, Slash, Virginia, Pond, Pitch, and Spruce Pines.

**Tree Selection** -Trees should be selected from stands on sites not subject to stress from periods of extreme drought stress because the desiccating effect of FIRESTORM is accentuated during drought, causing a reduction in the amount of oleoresin deposited in the xylem. Vigorous, non-stagnated natural or planted stands should be selected. Plan FIRESTORM treatments in stagnated or commercial timber stands, not sooner than three years after a commercial thinning.

### Application Directions

To bring the treatment into contact with sapwood (or xylem), apply water-diluted FIRESTORM to an appropriate wound in the tree trunk.

**Bark Streaks or Cuts:** Use a standard or rotary bark hack or a chainsaw shipping tool (used in naval stores work) to remove a single 1-inch wide streak of bark about 1-2 ft. from ground level. Do not exceed 1/3 of the circumference of the tree. Serious girdling of the trunk and premature death of the tree can result if multiple streaks or cuts are made. Apply a coarse spray (about 1.7-5.0 ml) FIRESTORM solution (1-5% cation, wt./wt. basis) to runoff to the exposed xylem, using a low-pressure sprayer. The amount of spray required per cut depends on tree circumference and the length of cut or streak. For example, for a 9-inch diameter tree, using 3 ml of 2 or 4% FIRESTORM solution will cover the 1-inch wide streak and will result in application of 60 or 120 mg per streak.

**Time of Treatment:** Less severe pine beetle infestation and longer tree life usually result during cool season treatments under non-drought seasons. However, resin soaking can occur from treatments made any time of the year.

**Interval between Treatment and Tree Harvest:** There should be at least a 6-month interval between application of FIRESTORM and tree harvest. However it is preferable the interval is from 12-24 months, even though intervals of over 6 months may not be possible under conditions of drought or serious pine beetle attacks possibly making early harvest necessary.

With this treatment, there is a potential for promoting beetle attack or causing premature death of the tree. At high dosage rates, desiccation of the xylem tissue, rather than the desired resin soaking, may occur.

**Note:** This type of treatment may reduce stem growth during between treatment and tree harvest.

Dilution Table for FIRESTORM (3.0 lbs. cation per gallon)	
Concentration of Cation Desired (wt./wt. basis)	Add the Following No. Gal. of Water to $\frac{2}{3}$ Gallon of FIRESTORM
0.2%	118.8
0.5%	46.8
1.0%	22.9
2.0%	10.9
3.0%	6.9
4.0%	4.9
5.0%	3.7

**ENVIRONMENTAL  
PROTECTION AGENCY  
FORM #8570-25**

# TEXAS DEPARTMENT OF AGRICULTURE

TODD STAPLES  
COMMISSIONER

July 7, 2008

Ms. Barbara Purnell  
Document Processing Desk (SLN)  
Office of Pesticide Programs - H7504C  
U.S. Environmental Protection Agency  
Aerial Rios Building  
1200 Pennsylvania Ave. NW  
Washington, D.C. 20460

Dear Ms. Purnell:

Subject: FIFRA Section 24(c)" Me-Too" label for Firestorm, (EPA Reg. No. 82557-1-400) for harvest aid applications on cotton in Texas (except in the counties of Starr, Hidalgo, Willacy and Cameron).

Enclosed is a FIFRA Section 24(c) "Me-Too" label from Chemtura Corporation for the SLN registration of paraquat herbicide originally registered by Syngenta CropProtection as Gramoxone Max (EPA Reg. No. 100-1074) and then subsequently as Gramoxone Inteon EPA Reg. No. 100-1217). This label is identical to the Syngenta label in rates applied of lbs ai/acre. In addition, we are supplying you with copies of the federally registered product label for your information to support this registration.

This proposed Me-Too SLN label will amend the federal label to authorize the use of Firestorm Herbicide as a harvest aid for cotton in Texas except in the following counties: Cameron, Starr, Hidalgo, and Willacy. This product label is registered as a trademark of Chemtura Corporation and will be distributed in Texas as Chemtura's Firestorm product.

The Texas Department of Agriculture hereby approves this FIFRA Section 24(c) application as of this date and assigns EPA SLN No. TX-080020.

Sincerely Yours,

A handwritten signature in black ink, appearing to read "Ambrose Charles", is written over a horizontal line.

Ambrose Charles

OFFICE OF  
PREVENTION, PESTICIDES AND  
TOXIC SUBSTANCES

Texas Department of Agriculture  
P.O. Box 12847  
Austin, TX 78711

ATTN: Ambrose Charles, Deputy Assistant Commissioner

Dear State Agency:

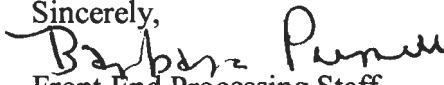

The Office of Pesticide Programs acknowledges receipt of the Section 24(c) application/notification for TX080020.

The package is being forwarded to the Product Manager for review.

To ensure that the Agency receives proper notification of your 24(c) applications/notifications it is necessary to use the correct mailing address. All new 24(c) applications should be sent to the following:

Document Processing Desk (SLN)  
Office of Pesticide Programs -7504P  
U.S. Environmental Protection Agency  
Ariel Rios Building  
1200 Pennsylvania Avenue, N.W.  
Washington, DC 20460

If you have any questions concerning the administrative screening of the package please contact the Front End Unit at (703)305-5780.

Sincerely,  
  
Front End Processing Staff  
Information Services Branch  
Information Technology & Resources Management Division
